

1. Types of mediums ?

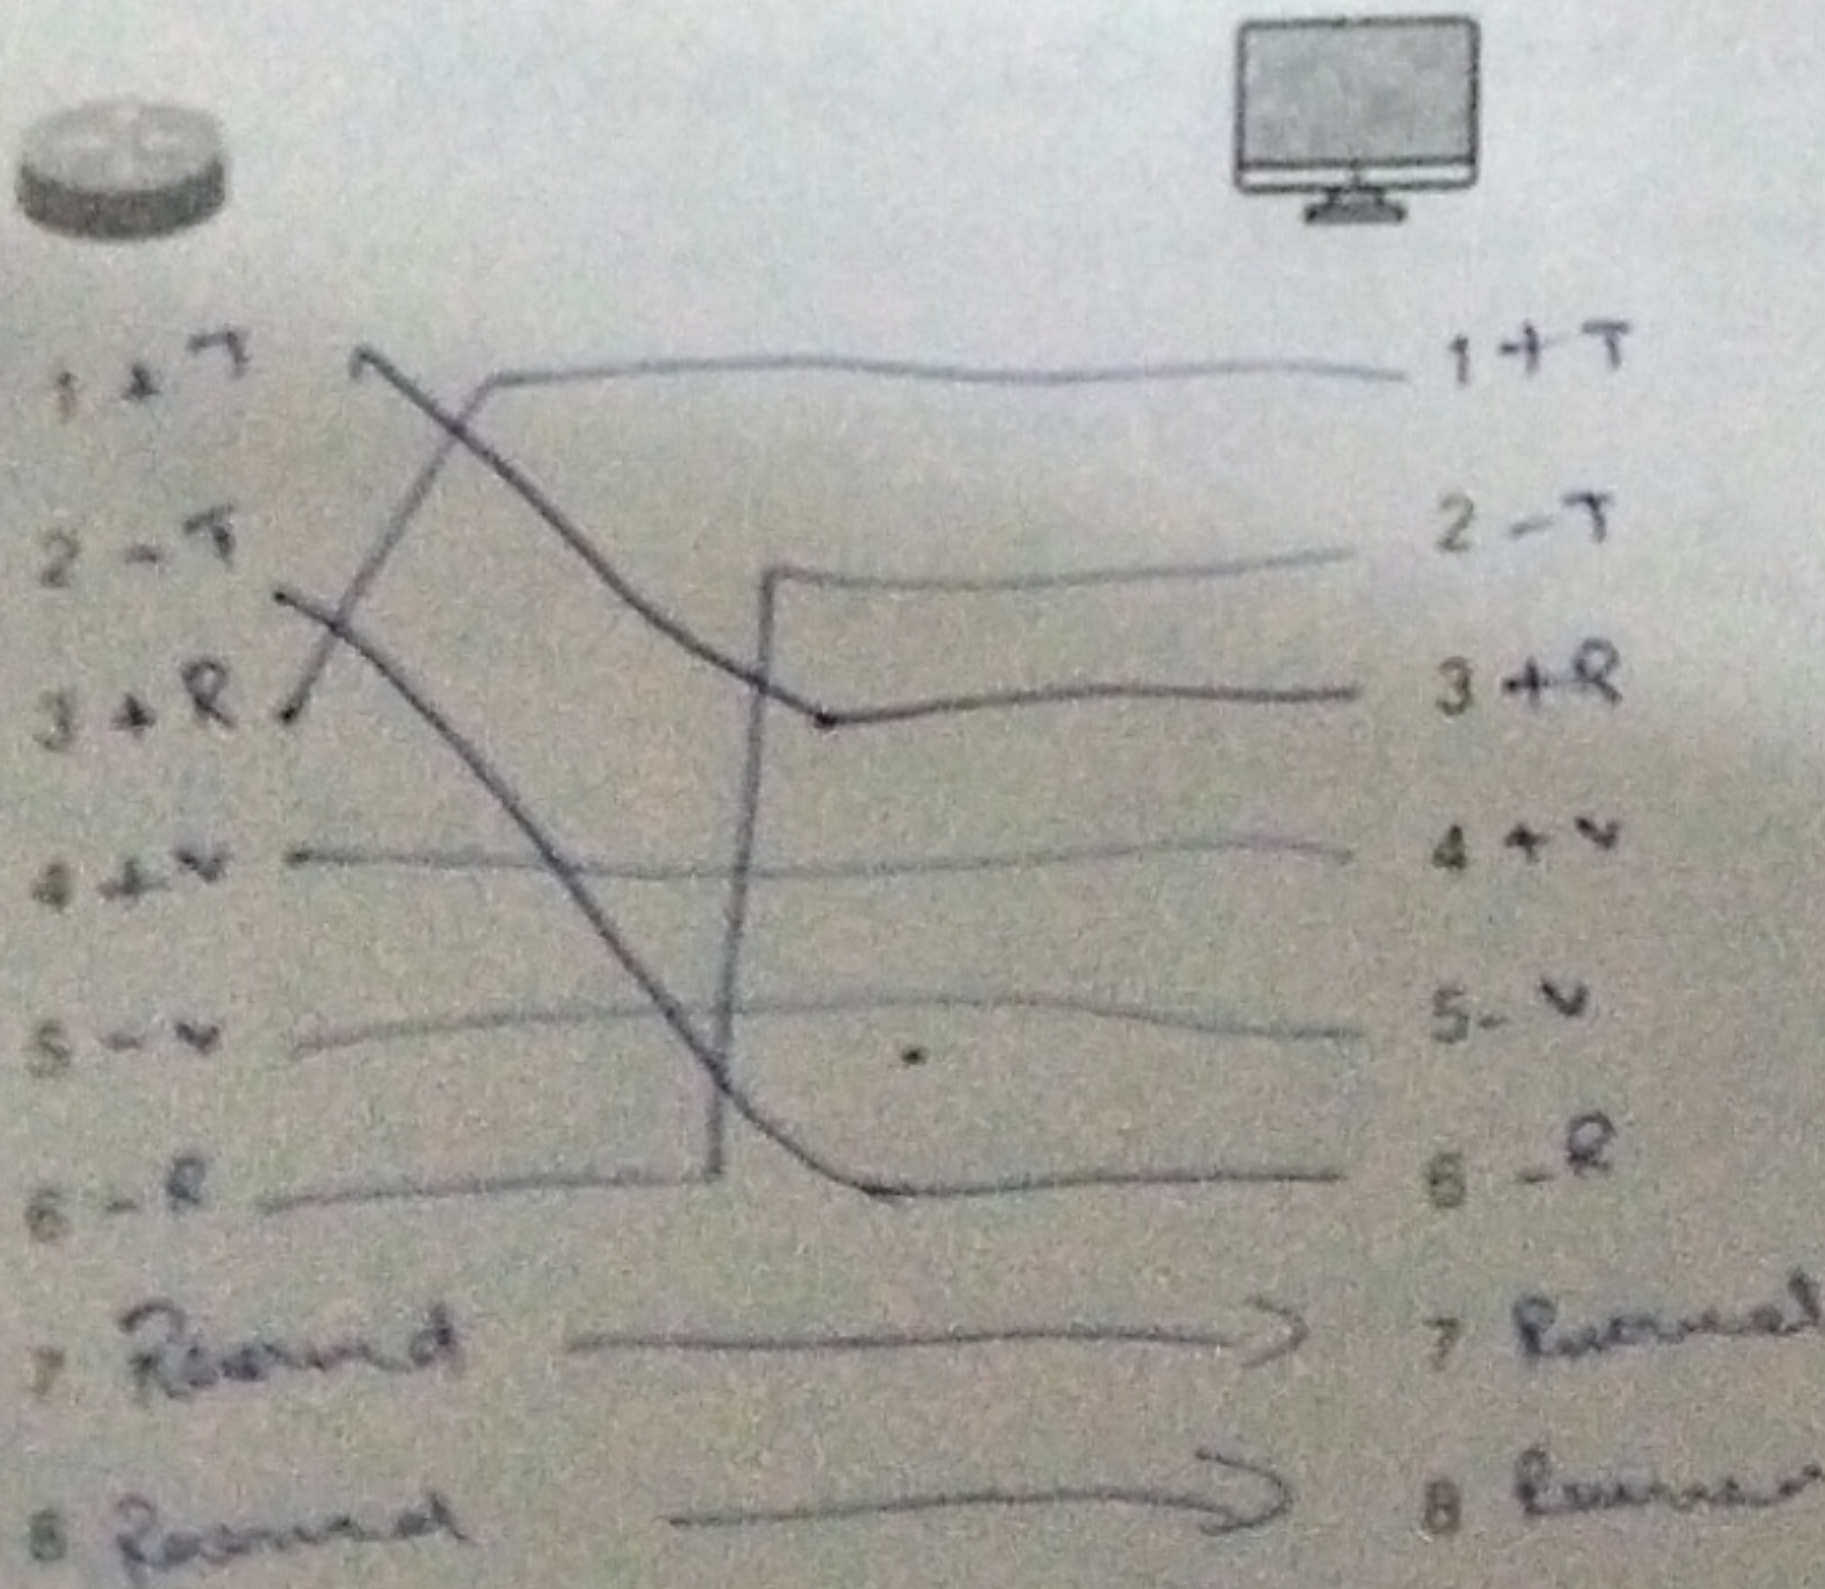

Three types:-

- ★ Radio frequency
- ★ Electrical signal
- ★ Light signal

2. Write down switch 8-pins ?

- 1 + Receiving
- 2 - Receiving
- 3 + Transmission
- 4 + voltage
- 5 - voltage
- 6 - Transmission
- 7 - Reserved
- 8 - Reserved

3. Connect utp cable between two devices

4. Explain AUTO MDIX ?

Auto MDIX is a feature which present in ethernet device (Network Interface Card) NIC, that lets the port automatically detect the connected cable is straight or crossover and then adjust internally to avoid any interruption in connection.

5. Explain POE injector ?

6. Explain POE switch ?

7. Explain types of nic & function ?

NIC - Network Interface Card is a hardware device that lets the computer or a device connect to a network.

Types :- 1. Wired Nic

A NIC that connects to a network using cables
for eg : Copper UTP, fiber.

2. Wireless Nic

A NIC that connects to a network without cables using radio frequency. for eg : (Wi-Fi)

Function : A NIC's main job is to send or receive data from one device to the other. It handles signal modulation & demodulation (conversion of binary to electrical & vice versa). It holds IP & MAC address of device.
